Customer's Challenge

Our customer wanted a new reporting platform to offer up a one stop shop for reports with a high degree of visual flair for their Employee Recognition Reporting Project.

Tail Wind Partnering

We developed a web front end on a reporting data warehouse to be a one stop shop for their reporting needs.

We used SSRS extensively; including linked reports, and expressions to give the client a powerful suite of tools to view their data in many different ways.

This included using JQuery UI for a smoother experience. Users can view all reports available to them without leaving a page.

They can view data by program and then zoom into that program to see more specific data.
